SOFTWARE DEVELOPER | TYPESCRIPT, REACT, NODE.JS, POSTGRESQL

SUMMARY

Self-taught full-stack developer with 3+ years of Shopify and front-end web development. Since January 2026 I've been building and running the Lamb Ascension Engine, a TypeScript/React/Node.js app on PostgreSQL that finds local business leads and manages outreach. Before that I spent years building Shopify stores and websites for small businesses, so I'm comfortable talking with clients and turning what they need into working software. Looking for a junior developer role on a remote team.

EXPERIENCE

Founder & Software Developer, Lamb Ascension

Jan 2026 – Present

- Built the Lamb Ascension Engine end to end: React 19 and TanStack Start front end, Node API on Vercel, PostgreSQL with Kysely, and better-auth for sign-in.
- Wired up prospect discovery through the Google Places API, fit scoring, and outreach sequences that wait for owner approval before any first contact.
- Wrote a background worker for scheduled follow-ups and reply syncing, plus Gmail and Google Calendar integrations for email and booking.
- Added an OpenAI Responses API tool-calling feature, SQL migrations, Node test suites, and a read-only "Sentinel" checker that GitHub Actions runs in CI and after deploys to catch do-not-contact and worker-health problems.

Freelance Web Developer (Shopify & Websites)

2021 – Present

- Built and maintained Shopify storefronts: theme customization in Liquid, product pages, apps, and order flow.
- Built client websites, landing pages, and mobile lead-capture forms with responsive layouts in HTML, CSS, and JavaScript.
- Produced site graphics and ad creative in Adobe Creative Suite (Photoshop, Illustrator).
- Set up paid search and social campaigns tied to click-to-call and form leads, and tuned keywords and copy based on lead quality.

Founder, Every Form

2025 – 2026

- Ran a direct-to-consumer store: storefront setup, product pages, paid ads, order flow, and tracking.

EDUCATION

Associate in Applied Science, Hill College | 2017 – 2019 | GPA 3.90

SKILLS

Languages and frameworks: TypeScript, JavaScript, React, Node.js, TanStack (Start, Router, Query), HTML/CSS, Tailwind CSS, Vite, responsive design
